Mr. Jorge Larobis

Introduction

Autoliv is the world's largest automotive safety supplier, with operations in 27 countries and 14 Tech Centers worldwide. They design, develop and manufacture world-leading passive safety systems for the automotive industry, as well as mobility safety solutions.

The Autoliv Philippines is responsible for molding polyurethane to raw steering wheels and wrapping leather to some particular steering wheel models.

I began training on February 10, 2023, and am expected to finish my Dual Training System This May 31, 2024.

Experiences

I am very grateful to have been part of serving the safety of the people within a competitive organization. Having been assigned as one of the Quality Assurance staff gives me an assurance of how each and every part of the product was important. My major assignments that are frequently performed are updating and monitoring the Statistical Process Control (SPC), Creating a Customer Quality Highlight and the AS412 & Jidoka Report of our Quality Line Leader for the morning meeting, Creating a Quality Alert for the Customer Callout to inform the operators that they have a Defect in the customer, Updating Documents for the proper standard of workflow, By under supervision of my supervisor I conducted a product audit of a specific product every month. Lastly, I participated every Event by decorating and helping my coworker to have a successful event. Also, I became more familiar with the Microsoft applications, Excel specifically, in tabulating data to present more evident and understandable outputs. I studied the existing formulas and learned to diagnose the errors that appear while editing. I learned the importance of understanding and frequent communication between the production, quality assurance and the whole team.

Currently, I am making a program that is specialized to store and easily access and review the data collected from the preceding productions.

I am also very thankful for the very accommodating and understanding staff at the quality assurance. They help me with making judgements and guidelines on what shall I do with the tasks that I am assigned. Also, to my superiors in quality assurance for continuously providing us with insights into the production and quality system.
